

## Instructions for Replacing Draftex Parallel Ruler Wire

1. Release break knob by turning counter clockwise.
2. Take off black end covers by all 4 screws on each side exposing white rollers.
3. Turn ruler over (bottom clear side up).
4. Position spring at the top and centre.
5. Run wire across and around top roller on each side.
6. Continue to opposite sides, feeding through break mechanism (crossing over only once).
7. Feed around bottom roller and out.
8. Replace covers.

Remount to board by the following

1. Place the Parallel rule on board and run wire around the top two clamps between washers positioning the spring in the centre.
2. Wrap the lower left corner of the wire around the clamp and tighten.
3. Pull the bottom right end of the wire until the spring just starts to stretch.
4. Position the top section of wires between washers on the clamps. Pull parallel rule down to the bottom of the board so it is even with both clamps.
5. Tighten the top clamps to keep the rule parallel.
